Problem Challenge 3: Find the First K Missing Positive Numbers (hard)

Problem Statement

Given an unsorted array containing numbers and a number ‘k’, find the first ‘k’ missing positive numbers in the array.

Example 1:

```
Input: [3, -1, 4, 5, 5], k=3
Output: [1, 2, 6]
Explanation: The smallest missing positive numbers are 1, 2 and 6.
```

Example 2:

```
Input: [2, 3, 4], k=3
Output: [1, 5, 6]
Explanation: The smallest missing positive numbers are 1, 5 and 6.
```

Example 3:

```
Input: [-2, -3, 4], k=2
Output: [1, 2]
Explanation: The smallest missing positive numbers are 1 and 2.
```

Try it yourself

Try solving this question here:

Java

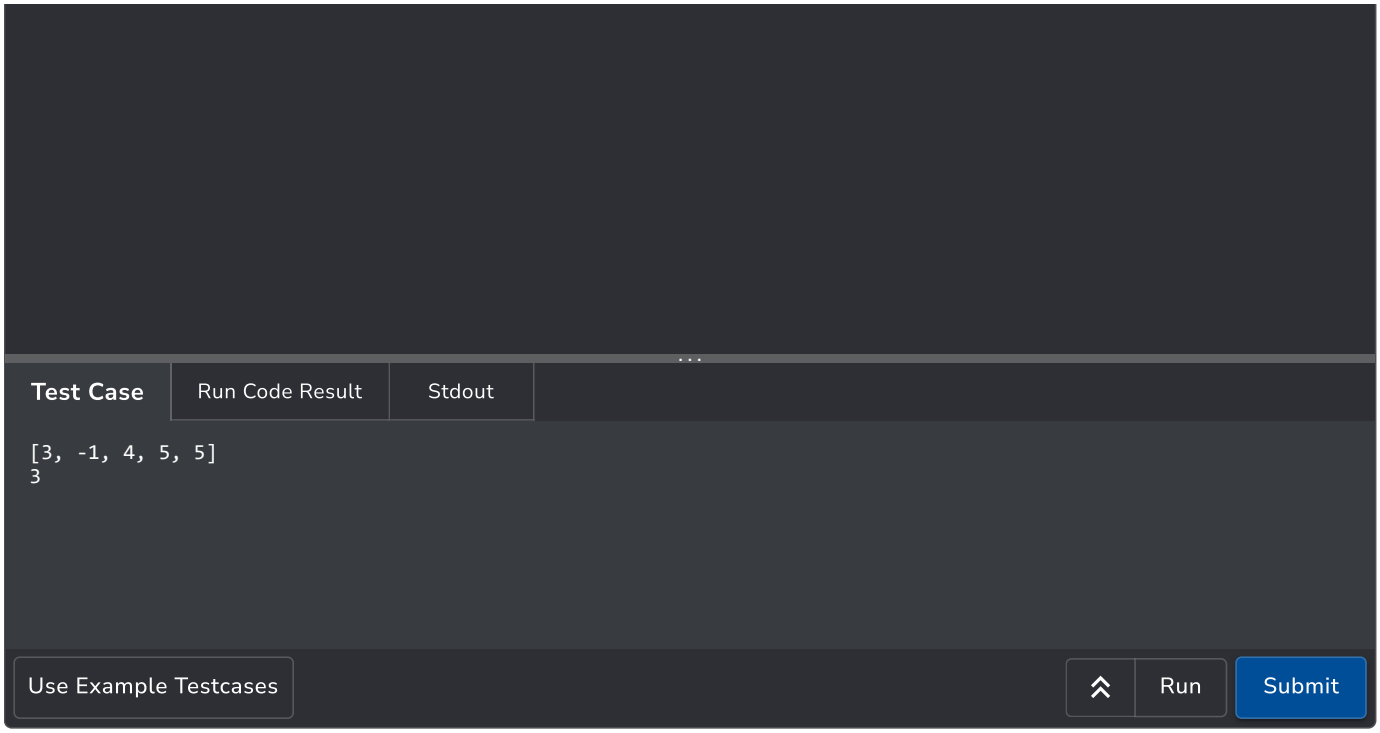

```
import java.util.*;

class Solution {

  public static List<Integer> findNumbers(int[] nums, int k) {
    List<Integer> missingNumbers = new ArrayList<>();
    // TODO: Write your code here
    return missingNumbers;
  }

}

```
