Bitonic Array Maximum (easy)

Problem Statement

Find the maximum value in a given Bitonic array. An array is considered bitonic if it is monotonically increasing and then monotonically decreasing. Monotonically increasing or decreasing means that for any index i in the array `arr[i] != arr[i+1]`.

Example 1:

```
Input: [1, 3, 8, 12, 4, 2]
Output: 12
Explanation: The maximum number in the input bitonic array is '12'.
```

Example 2:

```
Input: [3, 8, 3, 1]
Output: 8
```

Example 3:

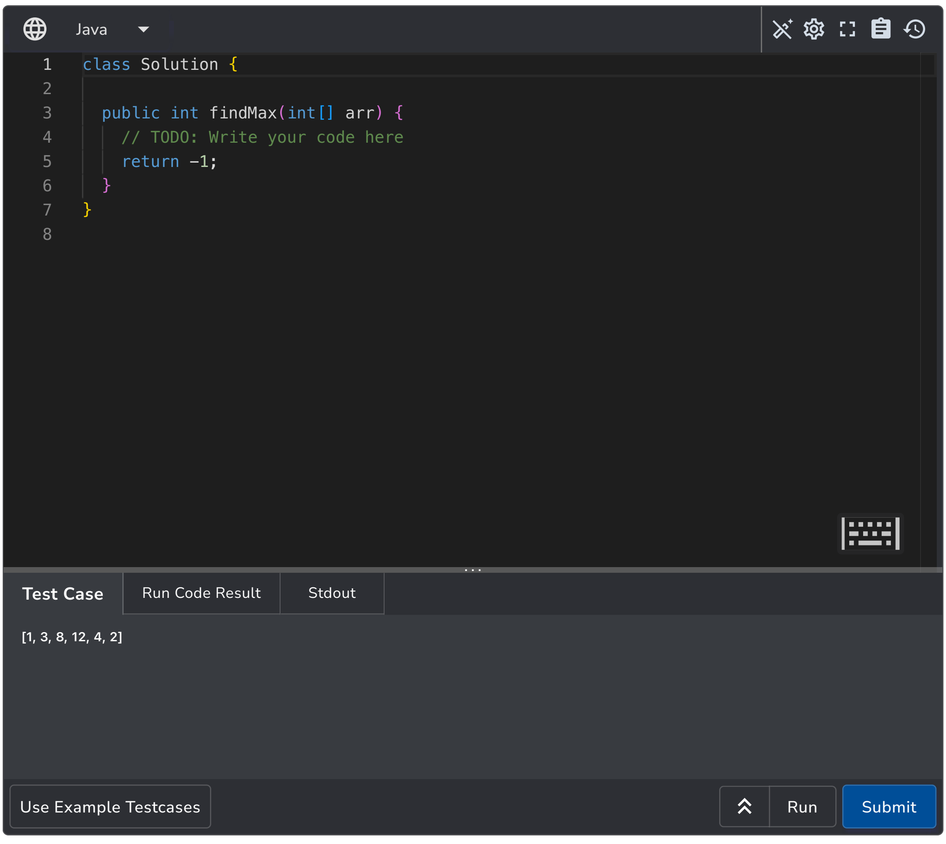

```
Input: [1, 3, 8, 12]
Output: 12
```

Example 4:

```
Input: [10, 9, 8]
Output: 10
```
