Maximum Distinct Elements (medium)

Problem Statement

Given an array of numbers and a number ‘K’, we need to remove ‘K’ numbers from the array such that we are left with maximum distinct numbers.

Example 1:

```
Input: [7, 3, 5, 8, 5, 3, 3], and K=2
Output: 3
Explanation: We can remove two occurrences of 3 to be left with 3
distinct numbers [7, 3, 8], we have
to skip 5 because it is not distinct and occurred twice.
Another solution could be to remove one instance of '5' and '3' each to
be left with three distinct numbers [7, 5, 8], in this case, we have to
skip 3 because it occurred twice.
```

Example 2:

```
Input: [3, 5, 12, 11, 12], and K=3
Output: 2
Explanation: We can remove one occurrence of 12, after which all numbers
will become distinct. Then we can delete any two numbers which will
leave us 2 distinct numbers in the result.
```

Example 3:

```
Input: [1, 2, 3, 3, 3, 3, 4, 4, 5, 5, 5], and K=2
Output: 3
Explanation: We can remove one occurrence of '4' to get three distinct
numbers.
```

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

class Solution {

  public int findMaximumDistinctElements(int[] nums, int k) {
    int distinctElementsCount = 0;
    // TODO: Write your code here
    return distinctElementsCount;
  }
}
```

Test Case | Run Code Result | Stdout

```
[7, 3, 5, 8, 5, 3, 3]
2
```

Use Example Testcases | Run | Submit
