Middle of the LinkedList (easy)

Problem Statement

Given the head of a **Singly LinkedList**, write a method to return the **middle node** of the LinkedList.

If the total number of nodes in the LinkedList is even, return the second middle node.

Example 1:

```
Input: 1 -> 2 -> 3 -> 4 -> 5 -> null
Output: 3
```

Example 2:

```
Input: 1 -> 2 -> 3 -> 4 -> 5 -> 6 -> null
Output: 4
```

Example 3:

```
Input: 1 -> 2 -> 3 -> 4 -> 5 -> 6 -> 7 -> null
Output: 4
```

Try it yourself

Try solving this question here:

Java

```java
/*class ListNode {
  int val = 0;
  ListNode next;

  ListNode(int value) {
    this.val = value;
  }
}*/

class Solution {

  public ListNode findMiddle(ListNode head) {
    // TODO: Write your code here
    return head;
  }

}

```

Test Case | Run Code Result | Stdout

[1,2,3,4,5]

Use Example Testcases | Run | Submit
