Number of Substrings Containing All Three Characters (medium)

Problem Statement

Given a string `s` containing only `a`, `b`, and `c` characters, return the number of substrings containing `at least` one occurences of `a`, `b` and `c` characters.

Examples

- **Example 1**:
  - **Input**: `"abc"`
  - **Expected Output**: `1`
  - **Justification**: The string itself ("abc") is the only substring containing all three characters.
- **Example 2**:
  - **Input**: `"abbcca"`
  - **Expected Output**: `5`
  - **Justification**: The substrings containing all 3 characters are "abbc", "abbcc", "abbcca", "bbcca", and "bcca".
- **Example 3**:
  - **Input**: `"ababacb"`
  - **Expected Output**: `9`
  - **Justification**: The substrings containing all 3 characters are "ababac", "babac", "abac", "bac", "ababacb", "babacb", "abacb", "bacb", and "acb".

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

public class Solution {
    public int numberOfSubstrings(String s) {
        // ToDo: Write Your Code Here.
        return 0;
    }
}

```

Test Case | Run Code Result | Stdout

"abcabc"

Use Example Testcases | Run | Submit
