Binary Tree Level Order Traversal (easy)

Problem Statement

Given a binary tree, populate an array to represent its level-by-level traversal. You should populate the values of all **nodes of each level from left to right** in separate sub-arrays.

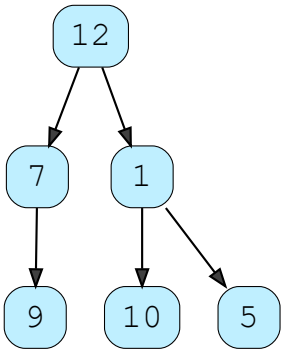

Example 1:

Level Order Traversal: [[1],
[2,3],
[4,5,6,7]]

Example 2:

Level Order Traversal: [[12],
[7,1],
[9,10,5]]

Try it yourself

Try solving this question here:

Java

```
1  import java.util.*;
```

```
2
3   /*class TreeNode {
4     int val;
5     TreeNode left;
6     TreeNode right;
7
8     TreeNode(int x) {
9       val = x;
10    }
11  };*/
12
13  class Solution {
14    public List<List<Integer>> traverse(TreeNode root) {
15      List<List<Integer>> result = new ArrayList<List<Integer>>();
16      // TODO: Write your code here
17      return result;
18    }
19  }
20
```

Test Case | Run Code Result | Stdout

```
[12,7,1,9,10,5]
```

Use Example Testcases | Run | Submit
