Zigzag Traversal (medium)

Problem Statement

Given a binary tree, populate an array to represent its zigzag level order traversal. You should populate the values of all **nodes of the first level from left to right**, then **right to left for the next level** and keep alternating in the same manner for the following levels.

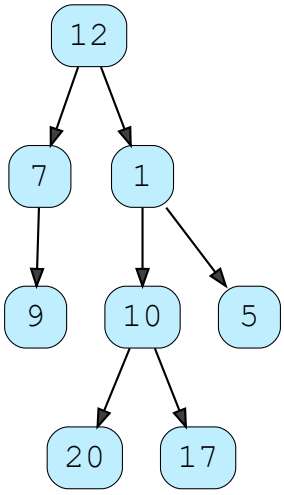

Example 1:

Zigzag Level Order Traversal: [[1],
[3, 2],
[4, 5, 6, 7]]

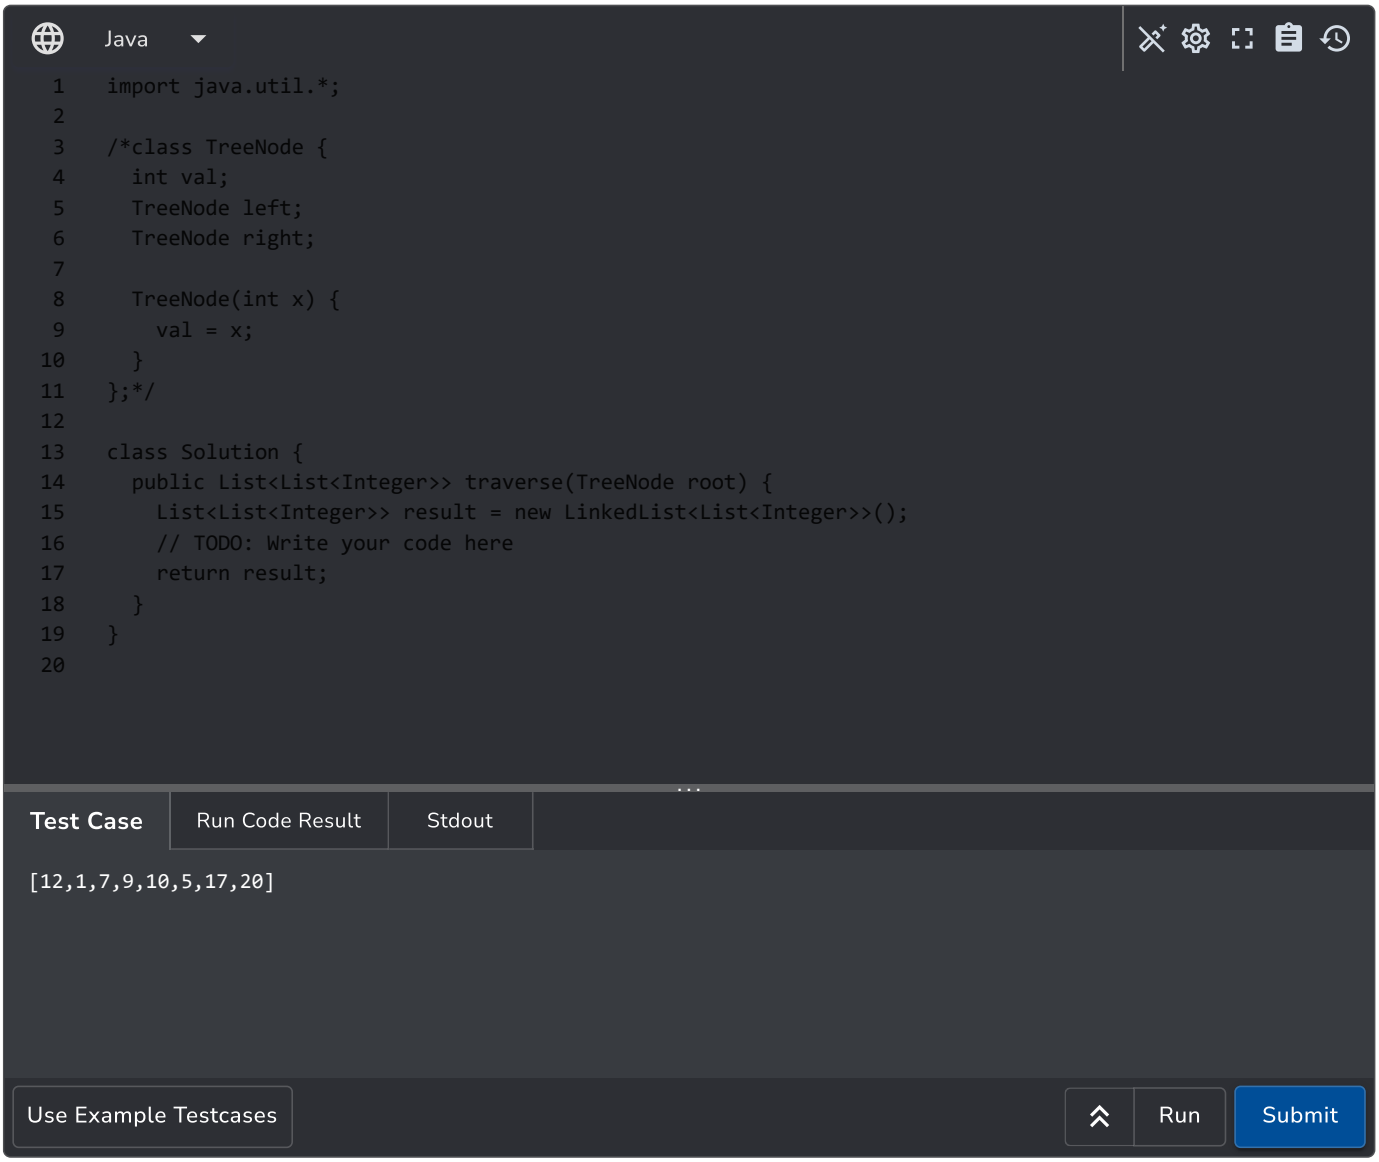

Example 2:

Zigzag Level Order Traversal: [[12],
[1,7],
[9,10,5]
[17,20]]
