Count Paths for a Sum (medium)

Problem Statement

Given a binary tree and a number ‘S’, find all paths in the tree such that the sum of all the node values of each path equals ‘S’. Please note that the paths can start or end at any node but all paths must follow direction from parent to child (top to bottom).

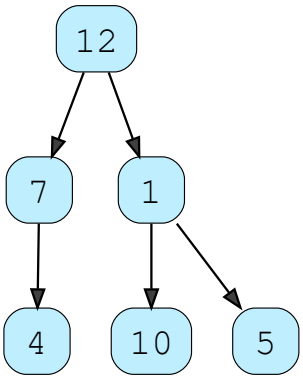

Example 1:

S: 12
Output: 3
Explanation: There are three paths with sum '12':
7 -> 5, 1 -> 9 -> 2, and 9 -> 3

Example 2:

S: 11
Output: 2
Explanation: Here are the two paths with sum '11':
7 -> 4 . and 1 -> 10.

Try it yourself

Java

```
import java.util.*;

/*class TreeNode {
  int val;
  TreeNode left;
```

```
    TreeNode right;

    TreeNode(int x) {
      val = x;
    }
  };*/

  class Solution {
    public int countPaths(TreeNode root, int S) {
      // TODO: Write your code here
      return 0;
    }
  }

```

Test Case | Run Code Result | Stdout

```
[1,0,1,1,null,6,5]
2
```

Use Example Testcases | Run | Submit
