# Problem Challenge 3: Frequency Stack (hard)

## Problem Statement

Design a class that simulates a Stack data structure, implementing the following two operations:

1. `push(int num)`: Pushes the number 'num' on the stack.
2. `pop()`: Returns the most frequent number in the stack. If there is a tie, return the number which was pushed later.

**Example:**

```
After following push operations: push(1), push(2), push(3), push(2),
push(1), push(2), push(5)

1. pop() should return 2, as it is the most frequent number
2. Next pop() should return 1
3. Next pop() should return 2
```

## Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

class Solution {
  public void push(int num) {
    // TODO: Write your code here
  }

  public int pop() {
    // TODO: Write your code here
    return 1;
  }
}

```

Test Case | Run Code Result | Stdout

[1,2,3,2,1,2,5]

Use Example Testcases | Run | Submit
