Problem Challenge 1: K Pairs with Largest Sums (hard)

Problem Statement

Given two sorted arrays in descending order, find 'K' pairs with the largest sum where each pair consists of numbers from both the arrays.

Example 1:

```
Input: L1=[9, 8, 2], L2=[6, 3, 1], K=3
Output: [9, 3], [9, 6], [8, 6]
Explanation: These 3 pairs have the largest sum. No other pair has a sum larger than any of these.
```

Example 2:

```
Input: L1=[5, 2, 1], L2=[2, -1], K=3
Output: [5, 2], [5, -1], [2, 2]
```

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

class Solution {

  public List<List<Integer>> findKLargestPairs(int[] nums1, int[] nums2, int k) {
    // TODO: Write your code here
    return new ArrayList<>();
  }
}

```

Test Case | Run Code Result | Stdout

[9, 8, 2]
[6, 3, 1]
3

Use Example Testcases | Run | Submit
