Triplets with Smaller Sum (medium)

Problem Statement

Given an array **arr** of unsorted numbers and a target sum, count all triplets in it such that **arr[i] + arr[j] + arr[k] < target** where **i**, **j**, and **k** are three different indices. Write a function to return the count of such triplets.

Example 1:

```
Input: [-1, 0, 2, 3], target=3
Output: 2
Explanation: There are two triplets whose sum is less than the target:
[-1, 0, 3], [-1, 0, 2]
```

Example 2:

```
Input: [-1, 4, 2, 1, 3], target=5
Output: 4
Explanation: There are four triplets whose sum is less than the target:
[-1, 1, 4], [-1, 1, 3], [-1, 1, 2], [-1, 2, 3]
```

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

class Solution {

  public int searchTriplets(int[] arr, int target) {
    int count = 0;
    // TODO: Write your code here
    return count;
  }
}

```

Test Case | Run Code Result | Stdout

[-1, 0, 2, 3]
3

Use Example Testcases | Run | Submit
