Problem Challenge 4: Words Concatenation (hard)

Problem Statement

Given a string and a list of words, find all the starting indices of substrings in the given string that are a **concatenation of all the given words** exactly once **without any overlapping** of words. It is given that all words are of the same length.

Example 1:

```
Input: String="catfoxcat", Words=["cat", "fox"]
Output: [0, 3]
Explanation: The two substring containing both the words are "catfox" & "foxcat".
```

Example 2:

```
Input: String="catcatfoxfox", Words=["cat", "fox"]
Output: [3]
Explanation: The only substring containing both the words is "catfox".
```

Try it yourself

Try solving this question here:

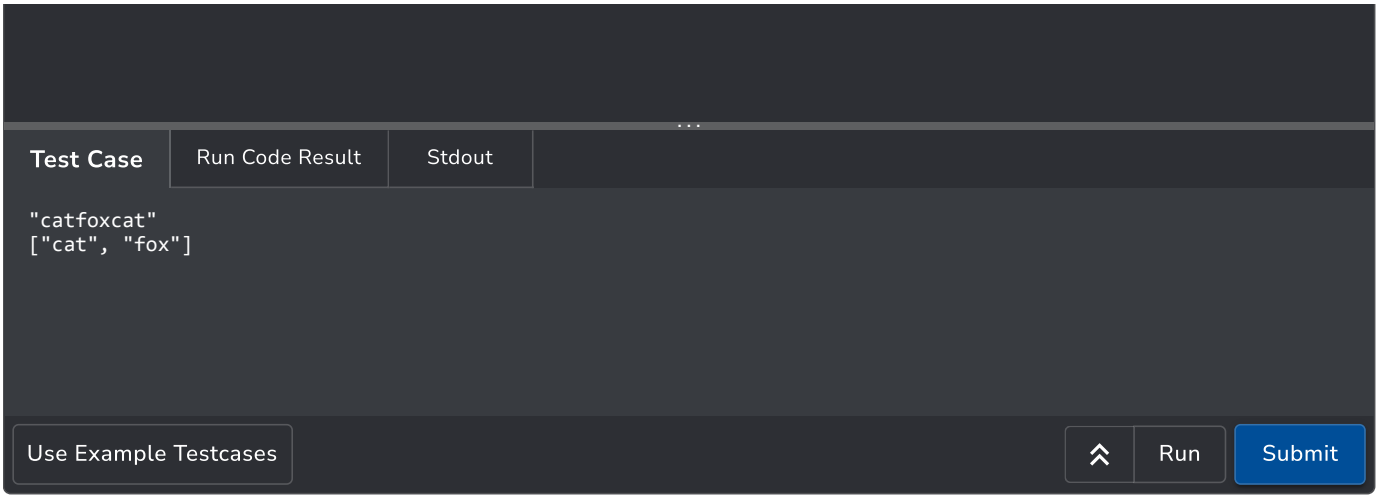

Java

```java

import java.util.*;

class Solution {
    public List<Integer> findWordConcatenation(String str, String[] words) {
      List<Integer> resultIndices = new ArrayList<Integer>();
      // TODO: Write your code here
      return resultIndices;
    }
}

```
