Who Should Take This Course?

This course will help you master data structures which are the foundational building blocks of computer science and software development.

Intended Audience

Are you aiming to enhance your data structures and problem-solving skills? This course is tailored for individuals eager to delve deep into the intricacies of data structures, be it for acing coding interviews, pursuing academic excellence, or simply nurturing a passion for computer science. We've carefully selected coding problems and their solutions across all popular data structures, with implementations available in **Java, Python, C++, JavaScript, C#,** and **GO** to cater to a diverse range of learners.

Prerequisites

A basic understanding of programming concepts will set the stage for your learning. We also recommend acquainting yourself with Big-O notation, as it plays a pivotal role in evaluating the efficiency of algorithms and data structures.

For feedback, comments, or suggestions, we can be reached at hi@designgurus.org

Happy learning!
