Tasks Scheduling Order (medium)

Problem Statement

There are ‘N’ tasks, labeled from ‘0’ to ‘N-1’. Each task can have some prerequisite tasks which need to be completed before it can be scheduled. Given the number of tasks and a list of prerequisite pairs, write a method to find the ordering of tasks we should pick to finish all tasks.

Example 1:

```
Input: Tasks=3, Prerequisites=[0, 1], [1, 2]
Output: [0, 1, 2]
Explanation: To execute task '1', task '0' needs to finish first.
Similarly, task '1' needs to finish before '2' can be scheduled. A
possible scheduling of tasks is: [0, 1, 2]
```

Example 2:

```
Input: Tasks=3, Prerequisites=[0, 1], [1, 2], [2, 0]
Output: []
Explanation: The tasks have a cyclic dependency, therefore they cannot
be scheduled.
```

Example 3:

```
Input: Tasks=6, Prerequisites=[2, 5], [0, 5], [0, 4], [1, 4], [3, 2],
[1, 3]
Output: [0 1 4 3 2 5]
Explanation: A possible scheduling of tasks is: [0 1 4 3 2 5]
```

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

class Solution {
  public List<Integer> findOrder(int tasks, int[][] prerequisites) {
    List<Integer> result = new ArrayList<>();
    // TODO: Write your code here
    return result;
  }
}
```

Test Case | Run Code Result | Stdout

```
3
[[0,1],[1,2]]
```

Use Example Testcases | Run | Submit
