Group Anagrams (Medium)

Problem Statement

Given a list of strings, the task is to group the anagrams together.

An anagram is a word or phrase formed by rearranging the letters of another, such as "cinema", formed from "iceman".

Example Generation

Example 1:

- **Input**: `["dog", "god", "hello"]`
- **Output**: `[["dog", "god"], ["hello"]]`
- **Justification**: "dog" and "god" are anagrams, so they are grouped together. "hello" does not have any anagrams in the list, so it is in its own group.

Example 2:

- **Input**: `["listen", "silent", "enlist"]`
- **Output**: `[["listen", "silent", "enlist"]]`
- **Justification**: All three words are anagrams of each other, so they are grouped together.

Example 3:

- **Input**: `["abc", "cab", "bca", "xyz", "zxy"]`
- **Output**: `[["abc", "cab", "bca"], ["xyz", "zxy"]]`
- **Justification**: "abc", "cab", and "bca" are anagrams, as are "xyz" and "zxy".

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

public class Solution {
    public List<List<String>> groupAnagrams(String[] strs) {
        // ToDo: Write Your Code Here.

        return new ArrayList<>();
    }
}
```

Test Case | Run Code Result | Stdout

["dog", "god", "hello"]
