Find the Median of a Number Stream (medium)

Problem Statement

Design a class to calculate the median of a number stream. The class should have the following two methods:

1. `insertNum(int num)`: stores the number in the class
2. `findMedian()`: returns the median of all numbers inserted in the class

If the count of numbers inserted in the class is even, the median will be the average of the middle two numbers.

Example 1:

```
1. insertNum(3)
2. insertNum(1)
3. findMedian() -> output: 2
4. insertNum(5)
5. findMedian() -> output: 3
6. insertNum(4)
7. findMedian() -> output: 3.5
```

Try it yourself

Try solving this question here:

Java

```
import java.util.*;

class Solution {
  public Solution()
  {
    //TODO: Write your code here
  }

  public void insertNum(int num) {
    // TODO: Write your code here
    return;
  }

  public  double findMedian() {
    // TODO: Write your code here
    return 0;
```

```
    }
  }

```

Test Case | Run Code Result | Stdout

```
[3,1]
```

Use Example Testcases | Run | Submit
