Minimum Coin Change

Introduction

Given an infinite supply of ‘n’ coin denominations and a total money amount, we are asked to find the minimum number of coins needed to make up that amount.

Example 1:

```
Denominations: {1,2,3}
Total amount: 5
Output: 2
Explanation: We need a minimum of two coins {2,3} to make a total of '5'
```

Example 2:

```
Denominations: {1,2,3}
Total amount: 11
Output: 4
Explanation: We need a minimum of four coins {2,3,3,3} to make a total of '11'
```

Problem Statement

Given a number array to represent different coin denominations and a total amount 'T', we need to find the minimum number of coins needed to make a change for 'T'. We can assume an infinite supply of coins, therefore, each coin can be chosen multiple times.

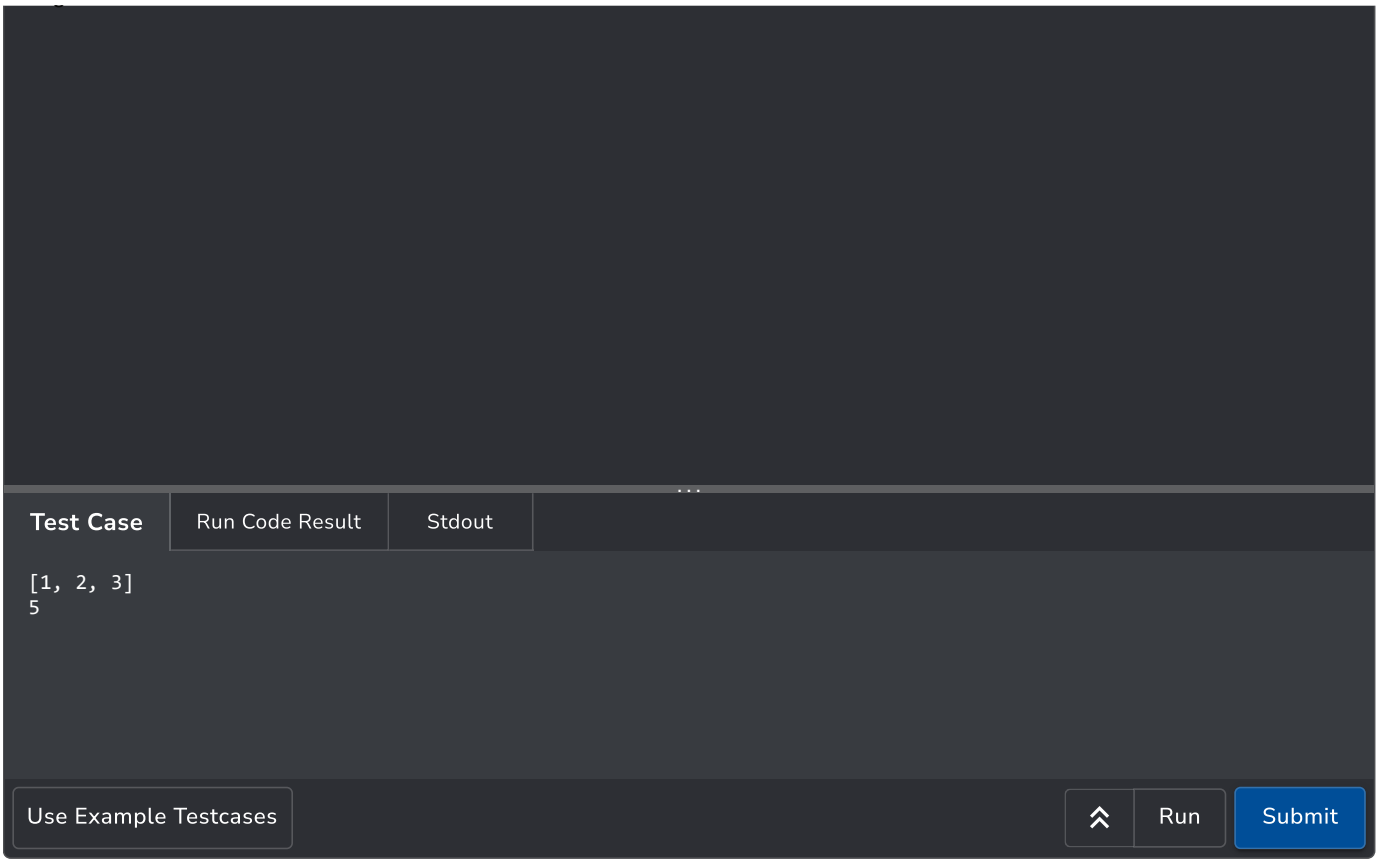

Try it yourself

Try solving this question here:

Java

```
class Solution {

  public int countChange(int[] denominations, int total) {
    // TODO: Write your code here
    return -1;
  }
}
```
