Minimum Deletions in a String to make it a Palindrome

Problem Statement

Given a string, find the minimum number of characters that we can remove to make it a palindrome.

Example 1:

```
Input: "abdbca"
Output: 1
Explanation: By removing "c", we get a palindrome "abdba".
```

Example 2:

```
Input: = "cddpd"
Output: 2
Explanation: Deleting "cp", we get a palindrome "ddd".
```

Example 3:

```
Input: = "pqr"
Output: 2
Explanation: We have to remove any two characters to get a palindrome, e.g. if we
remove "pq", we get palindrome "r".
```

Try it yourself

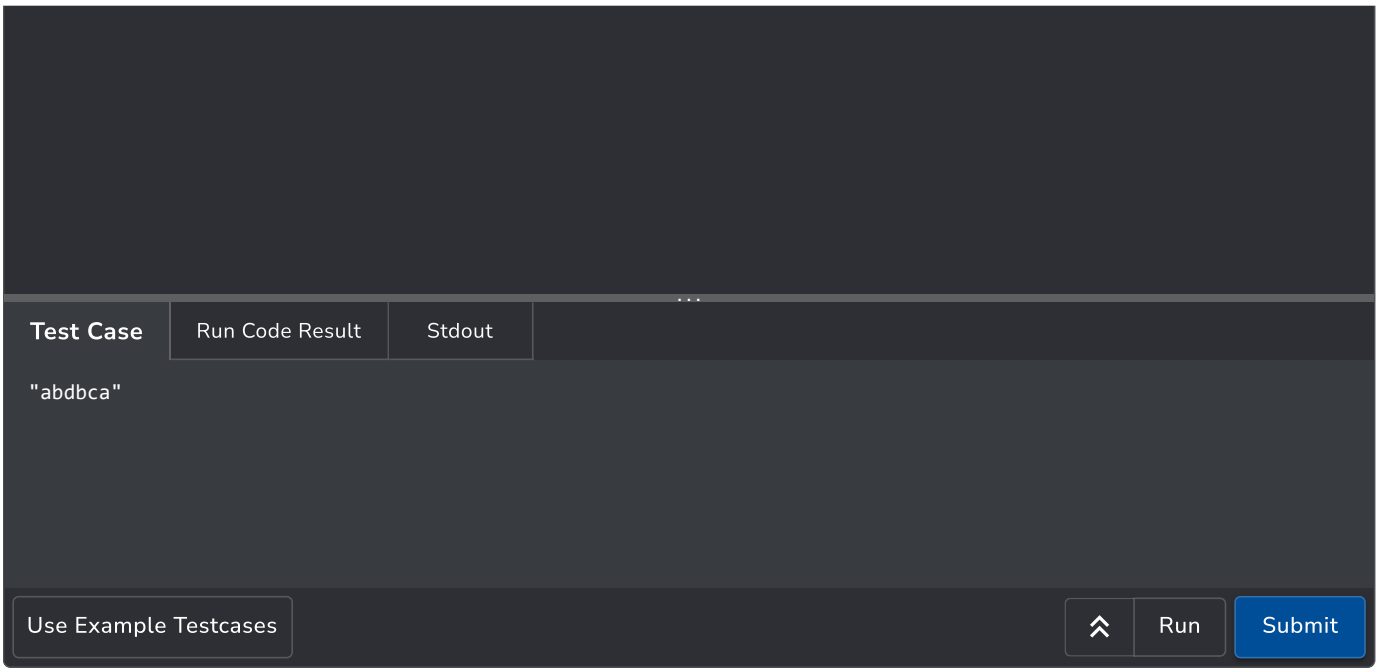

Try solving this question here:

Java

```
class Solution {

  public int findMinimumDeletions(String st) {
    // TODO: Write your code here
    return -1;
  }
}

```
