Tree Diameter (easy)

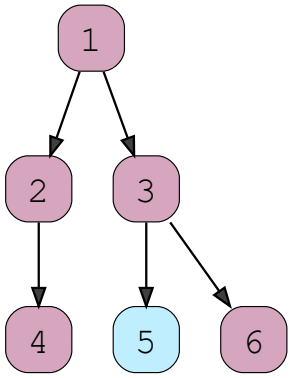

Problem Statement

Given a binary tree, find the length of its diameter. The diameter of a tree is the number of nodes on the **longest path between any two leaf nodes**. The diameter of a tree may or may not pass through the root.

Note: You can always assume that there are at least two leaf nodes in the given tree.

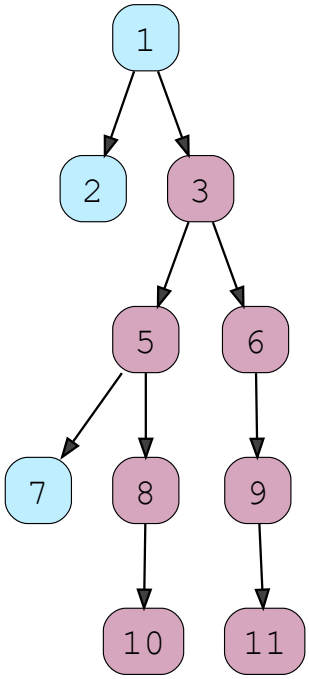

Example 1:

Output: 5
Explanation: The diameter of the tree is: [4, 2, 1, 3, 6]

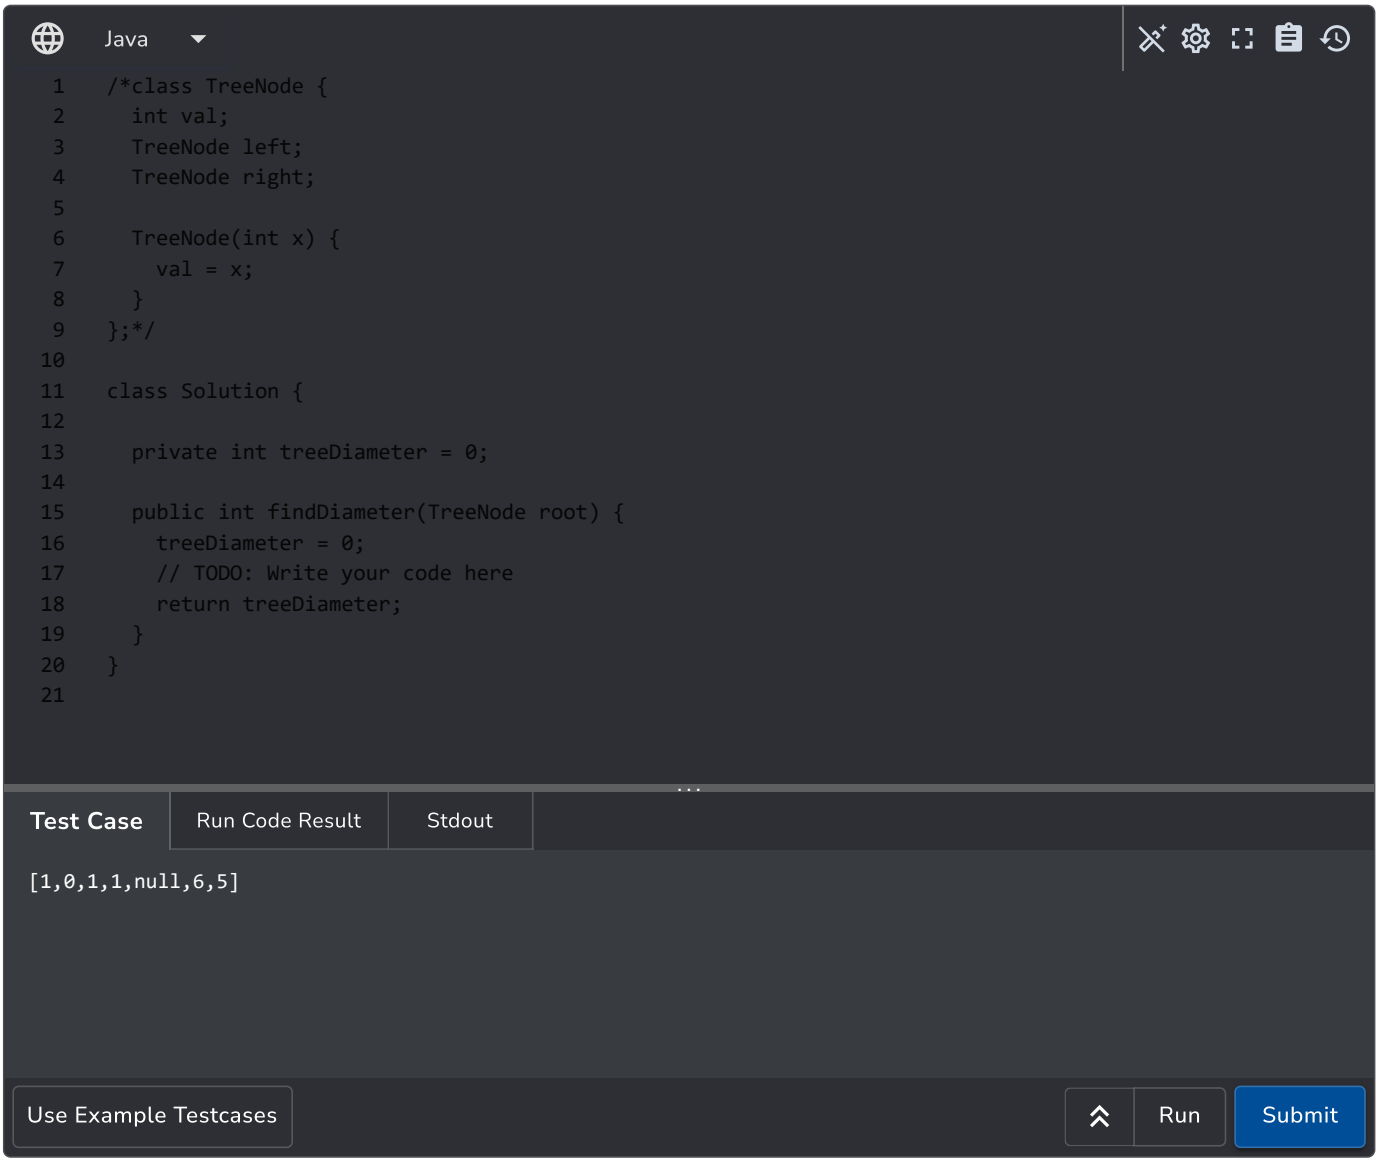

Example 2:

Output: 7
Explanation: The diameter of the tree is: [10, 8, 5, 3, 6, 9, 11]
