Max Consecutive Ones III (medium)

Problem Statement

Given an array `nums` containing `1` and `0` digits, return the maximum number of consecutive `1`s if you can flip at most any `k` `0`s.

Examples

- **Example 1**:
  - Input: nums = `[1, 0, 1, 1, 0, 0, 1, 1, 1, 0]`, k = `2`
  - Expected Output: `7`
  - Justification: Flipping the two 0s in the middle section `[0, 0]` results in the longest continuous sequence of 1s: `[1, 1, 1, 1, 1, 1, 1]`.
- **Example 2**:
  - Input: nums = `[0, 1, 1, 0, 1, 0, 1, 0, 1]`, k = `1`
  - Expected Output: `4`
  - Justification: Flipping the `0` at index 3 will yield a maximum continuous sequence of four 1s.
- **Example 3**:
  - Input: nums = `[1, 1, 0, 0, 0, 1, 1, 1, 0, 1, 1]`, k = `3`
  - Expected Output: `8`
  - Justification: Flipping the three 0s in the middle `[0, 0, 0]` results in the longest sequence of 1s: `[1, 1, 1, 1, 1, 1, 1, 1]`.

Try it yourself

Try solving this question here:

Java

```
1  public class Solution {
2      public int longestOnes(int[] A, int K) {
3          // ToDo: Write Your Code Here.
```

```
        return 0;
    }
}

```

Test Case | Run Code Result | Stdout

```
[1,1,1,0,0,0,1,1,1,1,0]
2
```

Use Example Testcases | Run | Submit
