Contiguous Array (medium)

Problem Statement

Given an array `nums` containing only `1` and `0` digits, return the `maximum length` of the `contiguous subarray` having an equal number of `1` and `0`.

Examples

- **Example 1**:
  - **Input**: `[0, 1]`
  - **Expected Output**: `2`
  - **Justification**: The longest subarray with equal numbers of 0s and 1s is [0, 1].
- **Example 2**:
  - **Input**: `[1, 1, 0, 0, 1, 1, 0]`
  - **Expected Output**: `6`
  - **Justification**: The subarray [1, 0, 0, 1, 1, 0] contains three 0s and three 1s.
- **Example 3**:
  - **Input**: [0, 1, 1, 0, 1, 0, 0, 1, 1]`
  - **Expected Output**: `8`
  - **Justification**: The subarray from the first to the eighth element is the longest with an equal number of 0s and 1s.

Try it yourself

Java

```java
import java.util.HashMap;
import java.util.Map;

public class Solution {
    public int findMaxLength(int[] nums) {
        // ToDo: Write Your Code Here.
        return 0;
```

```
        }
    }

```

Test Case | Run Code Result | Stdout

```
[0,1]
```

Use Example Testcases | Run | Submit
