Problem Challenge 2: Search in Rotated Array (medium)

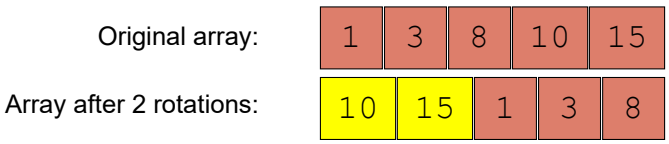

Problem Statement

Given an array of numbers which is sorted in ascending order and also rotated by some arbitrary number, find if a given ‘key’ is present in it.

Write a function to return the index of the ‘key’ in the rotated array. If the ‘key’ is not present, return -1. You can assume that the given array does not have any duplicates.

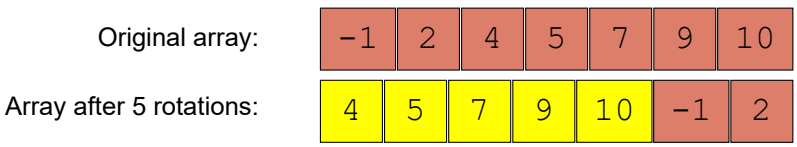

Example 1:

```
Input: [10, 15, 1, 3, 8], key = 15
Output: 1
Explanation: '15' is present in the array at index '1'.
```

Example 2:

```
Input: [4, 5, 7, 9, 10, -1, 2], key = 10
Output: 4
Explanation: '10' is present in the array at index '4'.
```

Try it yourself

Try solving this question here:

Java

```
class Solution {

  public int search(int[] arr, int key) {
    // TODO: Write your code here
    return -1;
```

```
    }
  }

```

Test Case | Run Code Result | Stdout

```
[10, 15, 1, 3, 8]
15
```

Use Example Testcases | Run | Submit
