Sum of Elements (medium)

Problem Statement

Given an array, find the sum of all numbers between the K1'th and K2'th smallest elements of that array.

Example 1:

```
Input: [1, 3, 12, 5, 15, 11], and K1=3, K2=6
Output: 23
Explanation: The 3rd smallest number is 5 and 6th smallest number 15. The sum of
numbers coming
between 5 and 15 is 23 (11+12).
```

Example 2:

```
Input: [3, 5, 8, 7], and K1=1, K2=4
Output: 12
Explanation: The sum of the numbers between the 1st smallest number (3) and the 4th
smallest
number (8) is 12 (5+7).
```

Try it yourself

Try solving this question here:

Java

```
1  import java.util.*;
2
3  class Solution {
4
5    public int findSumOfElements(int[] nums, int k1, int k2) {
6      int elementSum = 0;
7      // TODO: Write your code here
8      return elementSum;
9    }
10 }
11
```

Test Case | Run Code Result | Stdout

```
[1, 3, 12, 5, 15, 11]
3
6
```

Use Example Testcases | Run | Submit
