Problem Challenge 3: Frequency Stack (hard)

Problem Statement

Design a class that simulates a Stack data structure, implementing the following two operations:

1. `push(int num)`: Pushes the number 'num' on the stack.
2. `pop()`: Returns the most frequent number in the stack. If there is a tie, return the number which was pushed later.

Example:

```
After following push operations: push(1), push(2), push(3), push(2), push(1),
push(2), push(5)

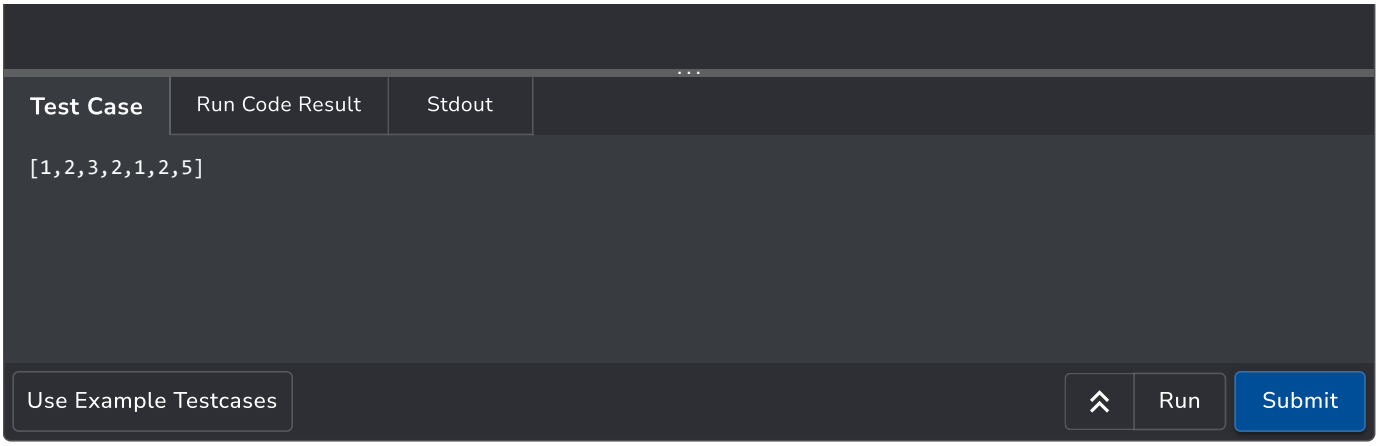

1. pop() should return 2, as it is the most frequent number
2. Next pop() should return 1
3. Next pop() should return 2
```

Try it yourself

Try solving this question here:

Java

```
1  import java.util.*;
2
3  class Solution {
4    public void push(int num) {
5      // TODO: Write your code here
6    }
7
8    public int pop() {
9      // TODO: Write your code here
10     return 1;
11   }
12 }
13
```
