Kth Smallest Number (easy)

Problem Statement

Given an unsorted array of numbers, find Kth smallest number in it.

Please note that it is the Kth smallest number in the sorted order, not the Kth distinct element.

Note: For a detailed discussion about different approaches to solve this problem, take a look at `Kth Smallest Number`.

Example 1:

```
Input: [1, 5, 12, 2, 11, 5], K = 3
Output: 5
Explanation: The 3rd smallest number is '5', as the first two smaller numbers are
[1, 2].
```

Example 2:

```
Input: [1, 5, 12, 2, 11, 5], K = 4
Output: 5
Explanation: The 4th smallest number is '5', as the first three small numbers are
[1, 2, 5].
```

Example 3:

```
Input: [5, 12, 11, -1, 12], K = 3
Output: 11
Explanation: The 3rd smallest number is '11', as the first two small numbers are
[5, -1].
```

Try it yourself

Try solving this question here:

Java

```
1  import java.util.*;
2
3  class Solution {
4
5    public int findKthSmallestNumber(int[] nums, int k) {
```

```
    // TODO: Write your code here
    return 0;
  }
  }

```

Test Case | Run Code Result | Stdout

```
[1, 5, 12, 2, 11, 5]
3
```

Use Example Testcases | Run | Submit
