Connect Ropes (easy)

Problem Statement

Given 'N' ropes with different lengths, we need to connect these ropes into one big rope with minimum cost. The cost of connecting two ropes is equal to the sum of their lengths.

Example 1:

```
Input: [1, 3, 11, 5]
Output: 33
Explanation: First connect 1+3(=4), then 4+5(=9), and then 9+11(=20). So the total cost is 33 (4+9+20)
```

Example 2:

```
Input: [3, 4, 5, 6]
Output: 36
Explanation: First connect 3+4(=7), then 5+6(=11), 7+11(=18). Total cost is 36 (7+11+18)
```

Example 3:

```
Input: [1, 3, 11, 5, 2]
Output: 42
Explanation: First connect 1+2(=3), then 3+3(=6), 6+5(=11), 11+11(=22). Total cost is 42 (3+6+11+22)
```

Try it yourself

Try solving this question here:

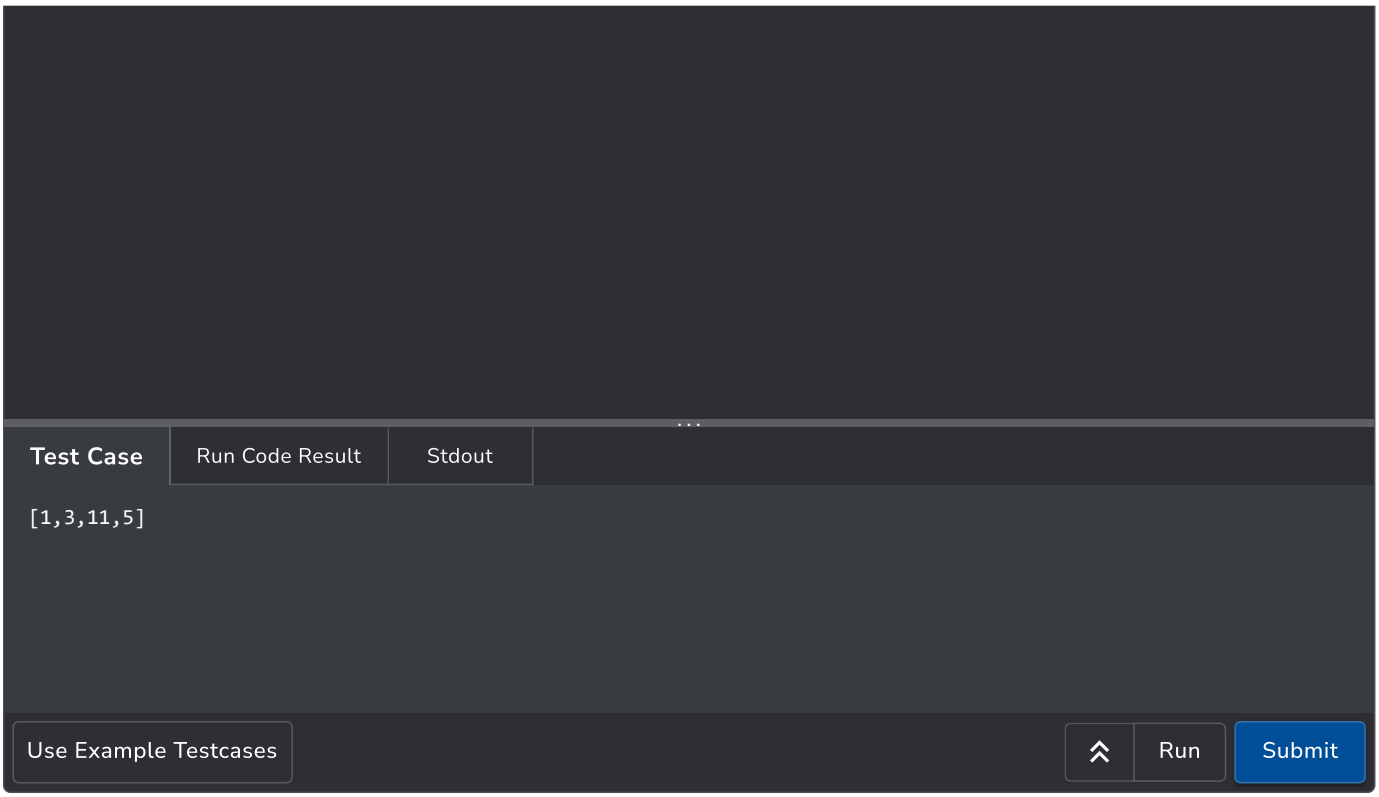

Java

```java
import java.util.*;

class Solution {

  public int minimumCostToConnectRopes(int[] ropeLengths) {
    // TODO: Write your code here
    return 0;
  }
}

```
