2. Factorial

Problem Statement

Calculate the Factorial of a Positive Number Using Recursion.

The factorial of a non-negative integer N, denoted as N!, is the product of all positive integers less than or equal to N. The factorial of 0 is defined as 1.

Here is what the example input/output looks like:

Input	Expected Output	Explanation
Number = 5	Factorial = 120	The factorial of 5 is calculated as 5 _ 4 _ 3 _ 2 _ 1 = 120.
Number = 7	Factorial = 5040	The factorial of 7 is calculated as 7 _ 6 _ 5 _ 4 _ 3 _ 2 _ 1 = 5040.
Number = 1	Factorial = 1	The factorial of 1 is 1 itself.

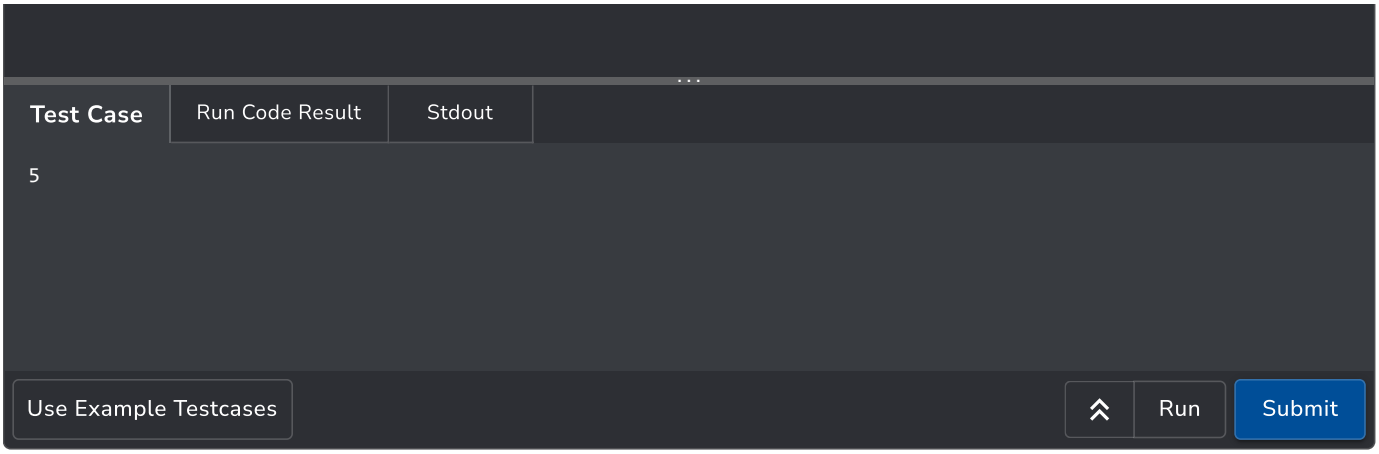

Try it yourself

Try solving this question here:

Java

```java
public class Solution {
    public static int calculateFactorial(int number) {
      // TODO: Write your code here
      return 0;
    }
}

```
