17. Good Number

Problem Statement

Write a Recursive Approach to Check if a Given Digit String Represents a Good Number.

A digit string is good if the digits (0-indexed) at even indices are even and the digits at odd indices are prime ((2, 3, 5, or 7).

Examples:

Sr #	Input	Expected Output	Description
1	02468	Not Good	Number 6 at index 3 is not a prime number.
2	23478	Good	All digits at even indices are even, and all digits at odd indices are prime. Therefore, the digit string is considered "good".
3	224365	Good	All digits at even indices are even, and all digits at odd indices are prime. Therefore, the digit string is considered "good".

Try it yourself

Try solving this question here:

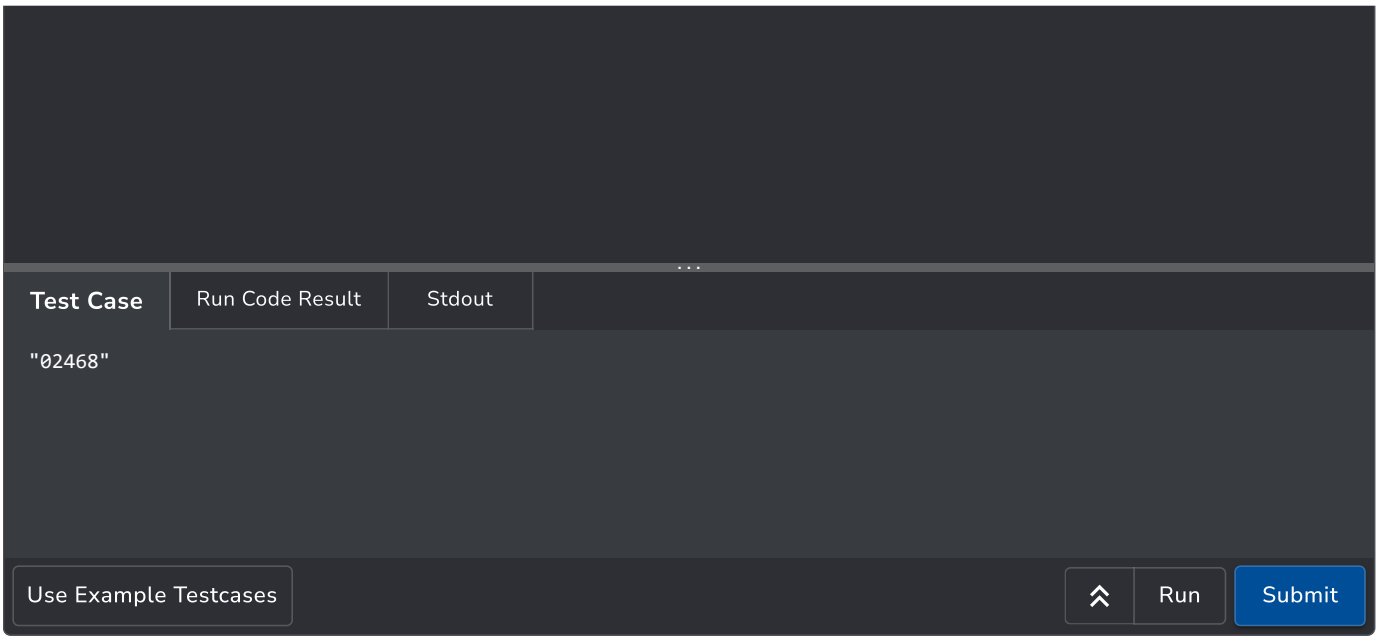

Java

```java
import java.util.Arrays;
import java.util.List;

public class Solution {

    public static boolean isGoodNumber(String arg) {
      // TODO: Write your code here
      return false;
    }
}

```
