Maximum Length of Pair Chain (medium)

Problem Statement

Given a collection of pairs where each pair contains two elements [a, b], find the maximum length of a chain you can form using pairs.

A pair [a, b] can follow another pair [c, d] in the chain if b < c.

You can select pairs in any order and don't need to use all the given pairs.

Examples

1. **Example 1:**
   - **Input:** `[[1,2], [3,4], [2,3]]`
   - **Expected Output:** `2`
   - **Justification:** The longest chain is `[1,2] -> [3,4]`. The chain `[1,2] -> [2,3]` is invalid because 2 is not smaller than 2.
2. **Example 2:**
   - **Input:** `[[5,6], [1,2], [8,9], [2,3]]`
   - **Expected Output:** `3`
   - **Justification:** The chain can be `[1,2] -> [5,6] -> [8,9]` or `[2,3] -> [5,6] -> [8, 9]`.
3. **Example 3:**
   - **Input:** `[[7,8], [5,6], [1,2], [3,5], [4,5], [2,3]]`
   - **Expected Output:** `3`
   - **Justification:** The longest possible chain is formed by chaining `[1,2] -> [3,5] -> [7,8]`.

Try it yourself

Try solving this question here:

Java

```java
import java.util.Arrays;

public class Solution {

    public int findLongestChain(int[][] pairs) {
        // ToDo: Write Your Code Here.
        return 0;
    }
}

```

Test Case | Run Code Result | Stdout

```
[[1,2], [3,4], [2,3]]
```

Use Example Testcases | Run | Submit
