Sort List (medium)

Problem Statement

Given a `head` of the linked list, return the list after sorting it in ascending order.

Examples

1. **Example 1**:
   - **Input**: `[3, 1, 2]`
   - **Expected Output**: `[1, 2, 3]`
   - **Justification**: The list is sorted in ascending order, with `1` coming before `2`, and `2` before `3`.
2. **Example 2**:
   - **Input**: `[4]`
   - **Expected Output**: `[4]`
   - **Justification**: A list with a single element is already sorted.
3. **Example 3**:
   - **Input**: `[9, 8, 7, 6, 5, 4, 3, 2, 1]`
   - **Expected Output**: `[1, 2, 3, 4, 5, 6, 7, 8, 9]`
   - **Justification**: The list is sorted in ascending order, with each element being smaller than the next.

Try it yourself

Try solving this question here:

Java

```java
// Definition for singly-linked list.
// public class ListNode {
//     int val;
//     ListNode next;
//     ListNode(int x) { val = x; }
//}

public class Solution {
```

```
 9        // Method to sort the list
10       public ListNode sortList(ListNode head) {
11           // ToDo: Write Your Code Here.
12           return head;
13       }
14   }
15
```
