Tree Diameter (easy)

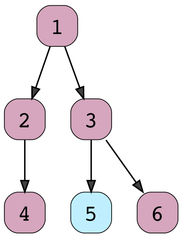

Problem Statement

Given a binary tree, find the length of its diameter. The diameter of a tree is the number of nodes on the **longest path between any two leaf nodes**. The diameter of a tree may or may not pass through the root.

Note: You can always assume that there are at least two leaf nodes in the given tree.

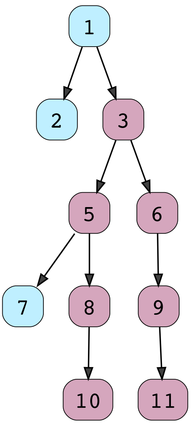

Example 1:

Output: 5
Explanation: The diameter of the tree is: [4, 2, 1, 3, 6]

Example 2:

Output: 7
Explanation: The diameter of the tree is: [10, 8, 5, 3, 6, 9, 11]

Try it yourself

Try solving this question here:

Java

```java
/*class TreeNode {
  int val;
  TreeNode left;
  TreeNode right;

  TreeNode(int x) {
    val = x;
  }
};*/

class Solution {

  private int treeDiameter = 0;

  public int findDiameter(TreeNode root) {
    treeDiameter = 0;
    // TODO: Write your code here
    return treeDiameter;
  }
}
```

Test Case | Run Code Result | Stdout

[1,0,1,1,null,6,5]

Use Example Testcases | Run | Submit
