Number of Good Pairs (easy)

Problem Statement

Given an array of integers `nums`, return the number of good pairs.

A pair `(i, j)` is called good if `nums[i] == nums[j]` and `i < j`.

Example 1:

```
Input: nums = [1,2,3,1,1,3]
Output: 4
Explanation: There are 4 good pairs, here are the indices: (0,3), (0,4), (3,4),
(2,5).
```

Example 2:

```
Input: nums = [1,1,1,1]
Output: 6
Explanation: Each pair in the array is a 'good pair'.
```

Example 3:

```
Input: words = nums = [1,2,3]
Output: 0
Explanation: No number is repeating.
```

Try it yourself

Try solving this question here:

Java

```java
class Solution {
  public int numGoodPairs(int[] nums) {
    int pairCount = 0;
    // TODO: Write your code here
    return pairCount;
  }
}
```

Test Case | Run Code Result | Stdout

```
[1,2,3,1,1,3]
```

Use Example Testcases | Run | Submit
