Pangram (easy)

Problem Statement

A pangram is a sentence where every letter of the English alphabet appears at least once.

Given a string `sentence` containing English letters (lower or upper-case), return `true` if `sentence` is a pangram, or `false` otherwise.

Note: The given `sentence` might contain other characters like digits or spaces, your solution should handle these too.

Example 1:

```
Input: sentence = "TheQuickBrownFoxJumpsOverTheLazyDog"
Output: true
Explanation: The sentence contains at least one occurrence of every letter of the
English alphabet either in lower or upper case.
```

Example 2:

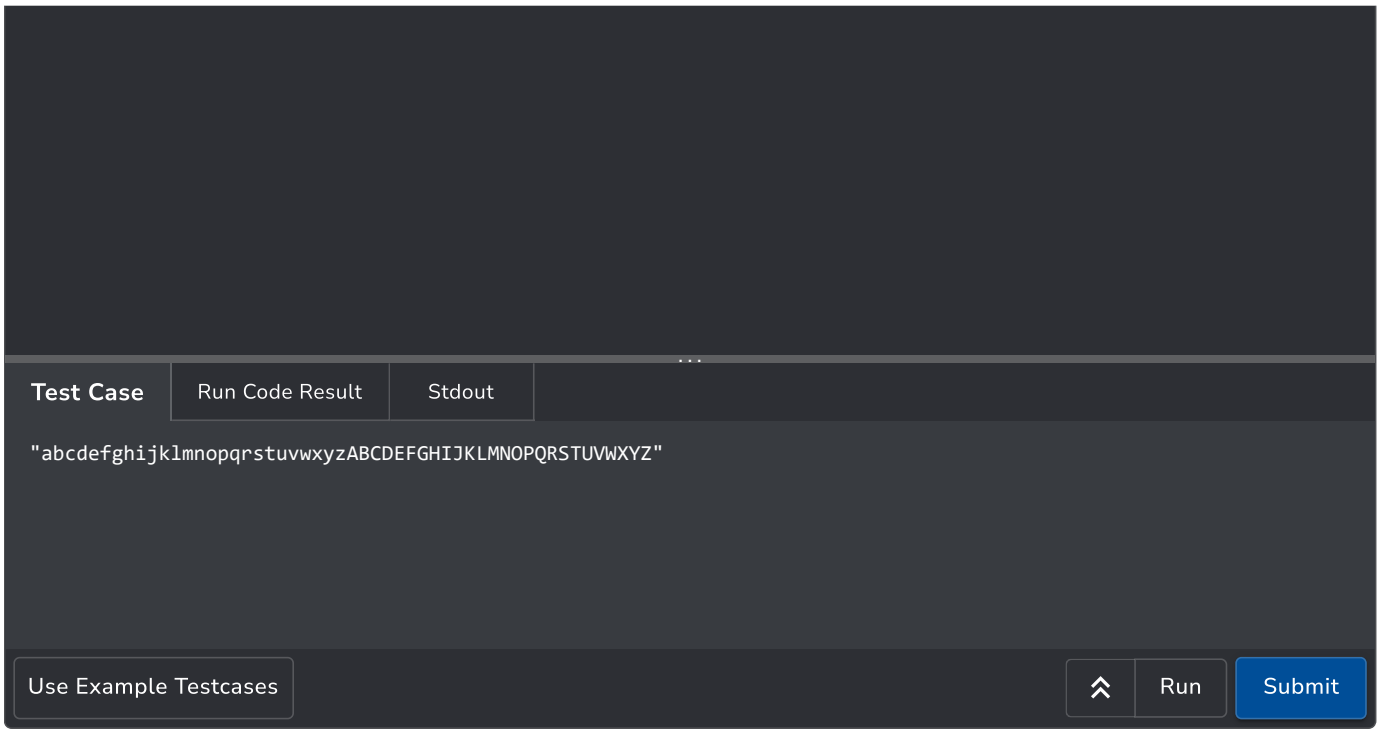

```
Input: sentence = "This is not a pangram"
Output: false
Explanation: The sentence doesn't contain at least one occurrence of every letter
of the English alphabet.
```

Try it yourself

Try solving this question here:

Java

```java
class Solution {
  public boolean checkIfPangram(String sentence) {
    // TODO: Write your code here
    return false;
  }
}
```
