Problem Challenge 1: Quadruple Sum to Target (medium)

Problem Statement

Given an array of unsorted numbers and a target number, find all **unique quadruplets** in it, whose **sum is equal to the target number**.

Example 1:

```
Input: [4, 1, 2, -1, 1, -3], target=1
Output: [-3, -1, 1, 4], [-3, 1, 1, 2]
Explanation: Both the quadruplets add up to the target.
```

Example 2:

```
Input: [2, 0, -1, 1, -2, 2], target=2
Output: [-2, 0, 2, 2], [-1, 0, 1, 2]
Explanation: Both the quadruplets add up to the target.
```

Try it yourself

Try solving this question here:

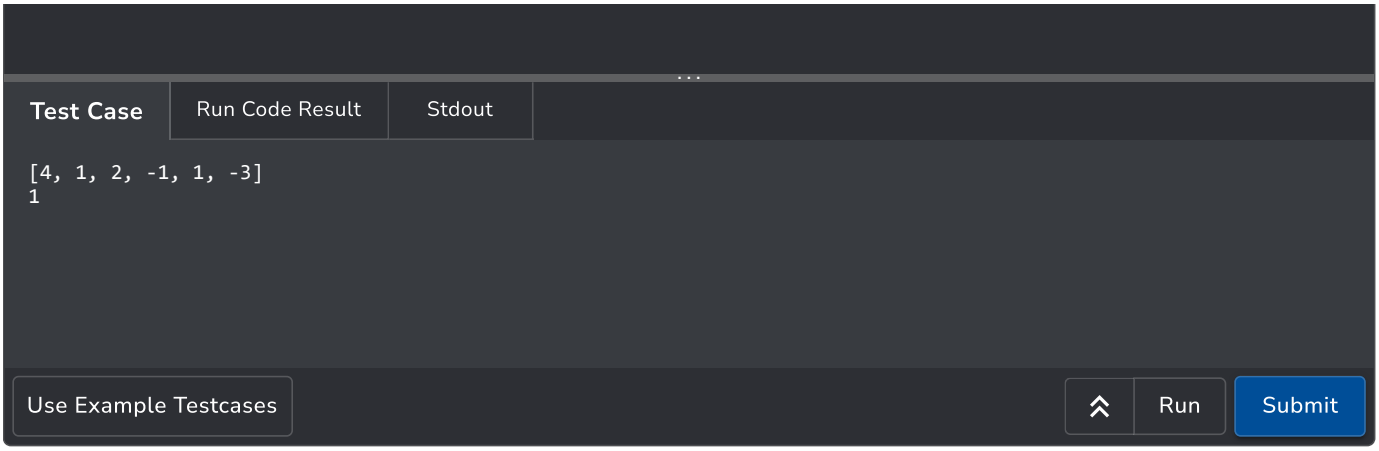

Java

```
import java.util.*;

class Solution {

  public List<List<Integer>> searchQuadruplets(int[] arr, int target) {
    List<List<Integer>> quadruplets = new ArrayList<>();
    // TODO: Write your code here
    return quadruplets;
  }
}

```
