# Problem Challenge 3: Minimum Window Sort (medium)

## Problem Statement

Given an array, find the length of the smallest subarray in it which when sorted will sort the whole array.

**Example 1:**

```
Input: [1, 2, 5, 3, 7, 10, 9, 12]
Output: 5
Explanation: We need to sort only the subarray [5, 3, 7, 10, 9] to make the whole
array sorted
```

**Example 2:**

```
Input: [1, 3, 2, 0, -1, 7, 10]
Output: 5
Explanation: We need to sort only the subarray [1, 3, 2, 0, -1] to make the whole
array sorted
```

**Example 3:**

```
Input: [1, 2, 3]
Output: 0
Explanation: The array is already sorted
```

**Example 4:**

```
Input: [3, 2, 1]
Output: 3
Explanation: The whole array needs to be sorted.
```

## Try it yourself

Try solving this question here:

Java

```
class Solution {

  public static int sort(int[] arr) {
    // TODO: Write your code here
    return 1;
```

```
    }
  }

```

Test Case | Run Code Result | Stdout

```
[1, 2, 5, 3, 7, 10, 9, 12]
```

Use Example Testcases | Run | Submit
