Remove Duplicate Letters (medium)

Problem Statement

Given a string `s`, remove all duplicate letters from the input string while maintaining the original order of the letters.

Additionally, the returned string should be the smallest in lexicographical order among all possible results.

Examples:

1. - **Input**: "bbaac"
   - **Expected Output**: "bac"
   - **Justification**: Removing the extra 'b' and one 'a' from the original string gives 'bac', which is the smallest lexicographical string without duplicate letters.
2. - **Input**: "zabccdef"
   - **Expected Output**: "zabcdef"
   - **Justification**: Removing one of the 'c's forms 'zabcdef', the smallest string in lexicographical order without duplicates.
3. - **Input**: "mnopmn"
   - **Expected Output**: "mnop"
   - **Justification**: Removing the second 'm' and 'n' gives 'mnop', which is the smallest possible string without duplicate characters.

Try it yourself

Try solving this question here:

Java

```java
import java.util.*;

public class Solution {
    public String removeDuplicateLetters(String s) {
        // ToDo: Write Your Code Here.
        return "";
    }
```

```
8    }
9
```

Test Case | Run Code Result | Stdout

"bcabc"

Use Example Testcases | Run | Submit
