Problem Statement

Given an m x n grid of characters board and a string word, return true if the word exists in the grid.

The word can be constructed from letters of sequentially adjacent cells, where adjacent cells are horizontally or vertically neighboring. The same letter cell may not be used more than once.

Example 1:

Input: word="ABCCED", board:

```
{ 'A', 'B', 'C', 'E' },
{ 'S', 'F', 'C', 'S' },
{ 'A', 'D', 'E', 'E' }
```

Output: true Explanation: The word exists in the board:

-> { '**A**', '**B**', '**C**', 'E' },

-> { 'S', 'F', '**C**', 'S' },

-> { 'A', '**D**', '**E**', 'E' }

Example 2:

Input: word="SEE", board:

```
{ 'A', 'B', 'C', 'E' },
{ 'S', 'F', 'C', 'S' },
{ 'A', 'D', 'E', 'E' }
```

Output: true Explanation: The word exists in the board:

-> { 'A', 'B', 'C', 'E' },

-> { 'S', 'F', 'C', '**S**' },

-> { 'A', 'D', '**E**', '**E**' }

Try it yourself

Try solving this question here:

Java

```java
public class Solution {
  public static boolean exist(char[][] board, String word) {
    // TODO: Write your code here
    return false;
  }
}

```

Test Case | Run Code Result | Stdout

```
[["A","B","C","E"],["S","F","C","S"],["A","D","E","E"]]
"ABCCED"
```

Use Example Testcases | Run | Submit
