Factor Combinations (medium)

Problem Statement

Numbers can be regarded as the product of their factors.

For example, 8 = 2 x 2 x 2 = 2 x 4.

Given an integer n, return all possible combinations of its factors. You may return the answer in **any order**.

Example 1:

```
Input: n = 8
Output: [[2, 2, 2], [2, 4]]
```

Example 2:

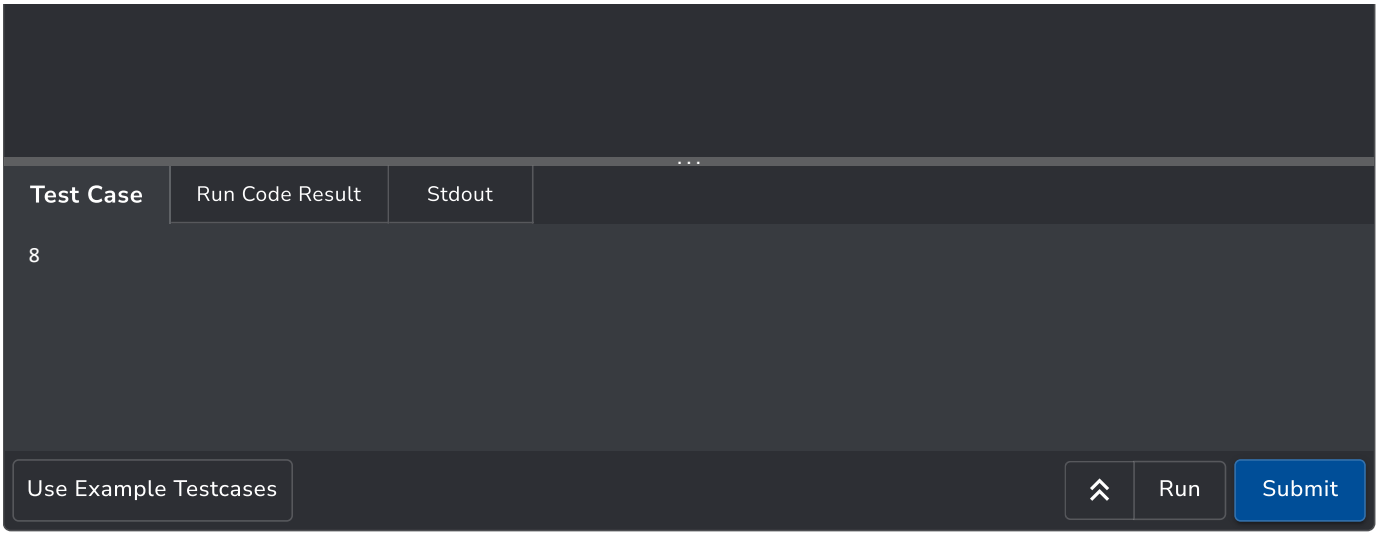

```
Input: n = 20
Output: [[2, 2, 5], [2, 10], [4, 5]]
```

Try it yourself

Try solving this question here:

Java

```
1  import java.util.ArrayList;
2  import java.util.List;
3
4  class Solution {
5    public List<List<Integer>> getFactors(int n) {
6      List<List<Integer>> result;
7      // TODO: Write your code here
8      return result;
9    }
10 }
11
```
