# 17. Good Number

## Problem Statement

Write a Recursive Approach to Check if a Given Digit String Represents a Good Number.

A digit string is good if the digits (0-indexed) at even indices are even and the digits at odd indices are prime ((2, 3, 5, or 7).

## Examples:

| Sr # | Input | Expected Output | Description |
|---|---|---|---|
| 1 | 02468 | Not Good | Number 6 at index 3 is not a prime number. |
| 2 | 23478 | Good | All digits at even indices are even, and all digits at odd indices are prime. Therefore, the digit string is considered "good". |
| 3 | 224365 | Good | All digits at even indices are even, and all digits at odd indices are prime. Therefore, the digit string is considered "good". |

## Try it yourself

Try solving this question here:

Java

```java
import java.util.Arrays;
import java.util.List;

public class Solution {

    public static boolean isGoodNumber(String arg) {
      // TODO: Write your code here
      return false;
    }
}

```

Test Case | Run Code Result | Stdout

"02468"

Use Example Testcases | Run | Submit
